SUMMARY

I am a Full Stack Web Developer geared towards entering the coding industry. I have built client-side, server-side and MERN full stack applications. I am excited to be finally graduated from the University of Arizona Full Stack Coding Bootcamp and am interested in an Entry Level/Junior Developer, Front End/Back End position.

EXPERIENCE

Postmates, Mesa/Gilbert, AZ — Delivery Courier

October 2018 - March 2019

This was a job that required me to work up to 6 hour shifts, driving all over Mesa and Gilbert to pick-up and deliver customer's food. I regularly got tipped and worked both days and nights.

Saguaro Lake Ranch, Mesa, AZ — *Server, Dishwasher*

March 2019 - May 2019

My duties at this ranch included interacting with guests (from all over the world) as well as serving, cleaning and washing dishes. I worked 5 hour shifts usually beginning at 7 a.m. The only reason my time here was short, was because the drive was a 20+ minute drive there and back all the way in the desert. My work schedule conflicted with my family's school and work schedules, which meant they had priority over the vehicle that we all shared.

EDUCATION

Red Mountain High School, Mesa, AZ — *Standard Diploma*

August 2014 - May 2018

I graduated Red Mountain in May of 2018. During this time I was engaged in extracurricular activities such as my church's bell choir, as well as club and school volleyball. I played bells for 7 years and volleyball for 4 years.

University of Arizona, Gilbert, AZ — *Full Stack Web Development*

November 2019 - May 2020

I recently graduated from the University of Arizona Full Stack Coding Bootcamp with an A, where I learned valuable skills in web development, building full stack applications from scratch, independent & team coding, and problem solving.

RELEVANT SKILLS

HTML5, CSS3, JavaScript, React, Bootstrap, jQuery, Ajax, MySQL, Sequelize, MongoDB, Mongoose, NodeJS, Express, Handlebars, Command Line, & Git.

APPLICATIONS

Marvel Review App

- *Handlebars, Bootstrap, Css3, JavaScript, jQuery, Ajax, NodeJS, Express, MySQL, Sequelize, Passport, Bcrypt, Marvel API*

This application, once signed in, lets the user search for a particular character or comicbook. The user may also create a review for a character as well as view their reviews.

Table Scraps

- *React, Bootstrap, Css3, JavaScript, jQuery, Axios, NodeJS, Express, MongoDB, Mongoose, Passport, Bcrypt, usda.gov API*

This is a recipe costing app. Once signing in, you are able to "Create a Recipe". Once you've named your recipe and given it formal cooking instructions, you can search for as many ingredients as you'd like. All you have to do is enter the grams and price of said ingredient, and once all your ingredients have been added, you can view your complete recipe in your library.
